

# Integration on the glass Application: User Manual

## 1 Pre-requirements

- Access to the IBM server where the application is stored
- IBM Notes version 9.0 or higher
- Local replicated copy of SCOPS database, with reading and writing access control level
- The local SCOPS replica has to be located on the root folder for IBM Notes application ( Notes/Data/ )
- The local replica of Integration on the glass must also be in ( Notes/Data/ )

## 2 Installation

1. On your IBM Notes environment, go to the Open application menu, and insert the direction of the server: `co110201.romelab.it.ibm.com`

Then, open the application SWIGB1 located in the folder / SW / IMTs / Benelux / CTP / (image 2.1)

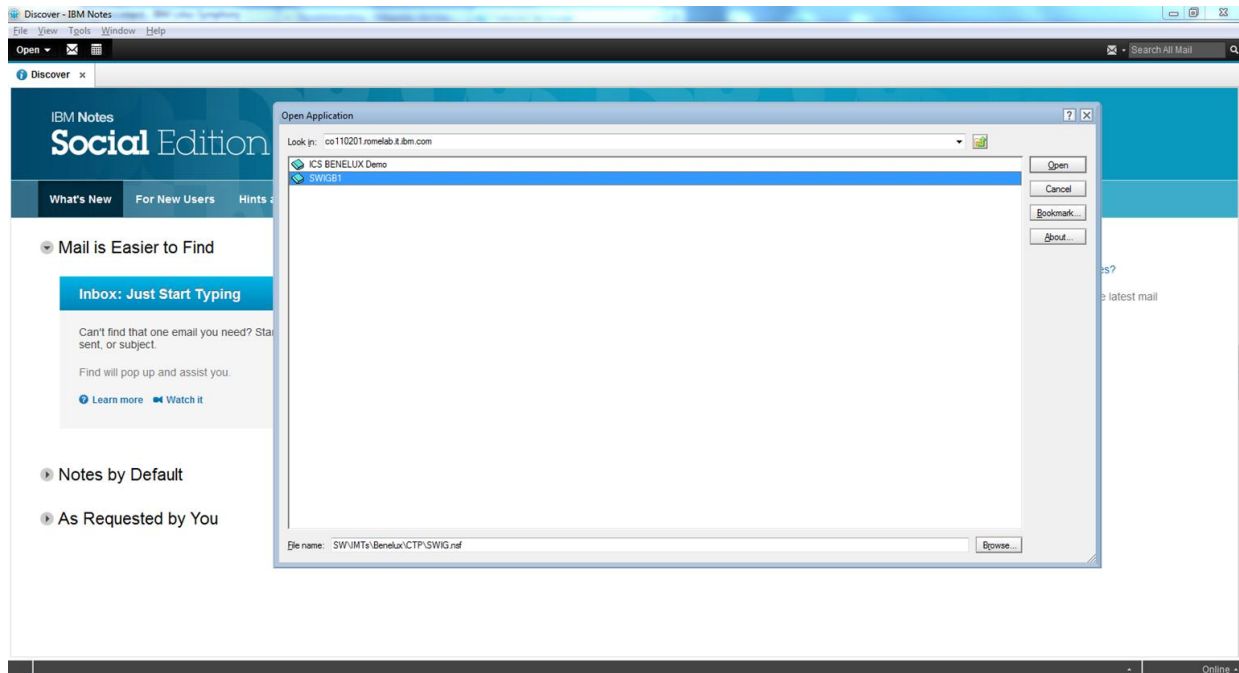

image 2.1

2. The server copy of the application will open automatically, but users can not work directly on that one. Close this instance of the application and look for its icon on the workspace. Then, right click on it and create a new local replica (image 2.2)

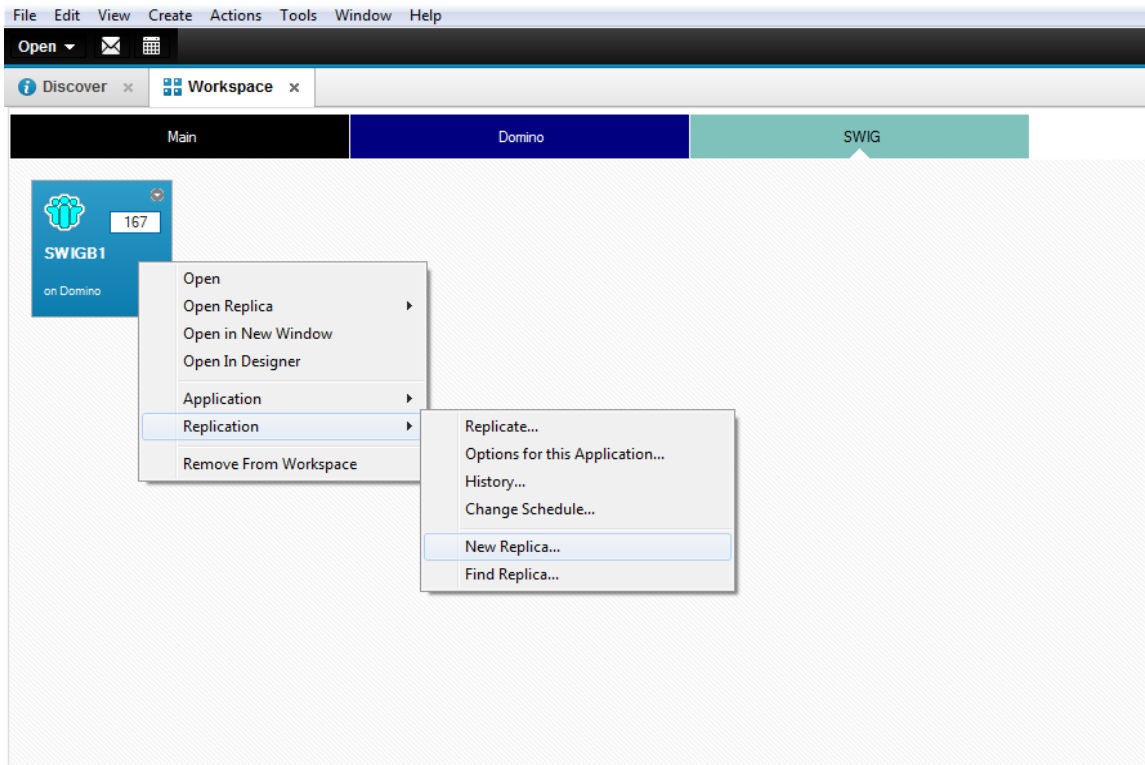

image 2.2

Select the path for the replica ( Notes/Data/ ) and create it. If you are a **Linux user**, **you must uncheck the Encrypt this replica options**, otherwise the application will not work correctly.

3. Once the replication process finish, re-start Notes 9.0 and open the local replica. You might want to delete the server replica from your workspace. Open the blue menu bar on the top of the screen, and press the button PVS in order to start the configuration for the SCOPS data.

image 2.3

Select the SCOPS replica that you previously placed in the root folder and follow the instructions to finish the configuration. (image 2.3)
